

HDI Predictor Documentation

Communication

Date	10 July 2025
Team ID	SB-GENAI-HDI-2025
Project Name	HDI Predictor - Human Development Index Classification System
Prepared By	Kankipati Sai Venkat

Communication Plan

As an individually-executed project within the SmartBridge AI/ML & GenAI track, communication centered on structured self-review checkpoints and mentor/evaluator touchpoints rather than internal team coordination.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Progress Self-Review	Daily	Personal notes / Jupyter notebook log	Sai Venkat	Track completed tasks and blockers
2	Milestone Check-in	Weekly	Program dashboard / email	Sai Venkat, Program Mentor	Review milestone completion against the sprint plan
3	Issue / Bug Resolution	As Needed	Debugging notes, documentation	Sai Venkat	Log and resolve issues in model training or Flask integration
4	Evaluator Review	Once (pre-submission)	Submission portal	Sai Venkat, Evaluator	Confirm all deliverables meet the checklist before final submission
5	Final Demo Rehearsal	Once	Local walkthrough	Sai Venkat	Ensure smooth end-to-end demo of all three prediction scenarios

Communication Challenges & Resolutions

S.No	Challenge Faced	Resolution / Action Taken
1	Working solo meant no immediate second opinion on model choices	Compared multiple algorithms (Logistic Regression, Decision Tree, RandomForest) against

		clear accuracy metrics before finalizing
2	Keeping documentation aligned with a fast-moving codebase	Updated documentation immediately after each milestone rather than deferring it to the end
3	Verifying Docker behaved identically to the local dev environment	Tested the containerized build early (Milestone 5) instead of waiting until final submission
